48 Month Questionnaire

45 months 0 days
through 50 months 30 days

On the following pages are questions about activities children may do. Your child may have already done some of the activities described here, and there may be some your child has not begun doing yet. For each item, please fill in the circle that indicates whether your child is doing the activity regularly, sometimes, or not yet.

Important Points to Remember:

Notes:

- Try each activity with your child before marking a response.
- Make completing this questionnaire a game that is fun for you and your child.
- Make sure your child is rested and fed.
- Please return this questionnaire by _____.

COMMUNICATION

	YES	SOMETIMES	NOT YET	_____
1. Does your child name at least three items from a common category? For example, if you say to your child, "Tell me some things that you can eat," does your child answer with something like "cookies, eggs, and cereal"? Or if you say, "Tell me the names of some animals," does your child answer with something like "cow, dog, and elephant"?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	_____
2. Does your child answer the following questions? (Mark "sometimes" if your child answers only one question.) "What do you do when you are hungry?" (Acceptable answers include "get food," "eat," "ask for something to eat," and "have a snack.") Please write your child's response: <div style="border: 1px solid black; border-radius: 15px; height: 60px; margin: 10px 0;"></div> "What do you do when you are tired?" (Acceptable answers include "take a nap," "rest," "go to sleep," "go to bed," "lie down," and "sit down.") 3. ASQ SCORE INTERPRETATION AND RECOMMENDATION FOR FOLLOW-UP: You must consider total area scores, overall responses, and other considerations, such as opportunities to practice skills, to determine appropriate follow-up.

If the child's total score is in the area, it is above the cutoff, and the child's development appears to be on schedule.
 If the child's total score is in the area, it is close to the cutoff. Provide learning activities and monitor.
 If the child's total score is in the area, it is below the cutoff. Further assessment with a professional may be needed.

4. FOLLOW-UP ACTION TAKEN: Check all that apply.

- Provide activities and rescreen in _____ months.
- Share results with primary health care provider.
- Refer for (circle all that apply) hearing, vision, and/or behavioral screening.
- Refer to primary health care provider or other community agency (specify reason): _____
- Refer to early intervention/early childhood special education.
- No further action taken at this time
- Other (specify): _____

5. OPTIONAL: Transfer item responses (Y = YES, S = SOMETIMES, N = NOT YET, X = response missing).

Do you hear me?

This may be the most important question you ever answer for your baby.

- Babies learn to talk during their first years. Words help them share thoughts and feelings with the important people in their world.
- As your baby hears words, language and learning begin and speech develops.
- The checklist above and on the other side shows you how learning helps the speech development of your child.
- Watch your child grow through stages of normal hearing and speech development. Seek help immediately if your child is not developing according to the checklist.

What can you do?

- Some infants are born with normal hearing and later become deaf or hard of hearing. That is why you must continue to fill out the checklist.
- If you think your child has a hearing problem, **do not delay**. Seek help **immediately**.

NOW...

- You know your child best. If you suspect a possible hearing loss, talk to your doctor about getting a hearing test.
- For questions or more information, contact Texas Early Hearing Detection and Intervention (TEHDI).

Texas Department of State Health Services Tuberculosis (TB) Questionnaire for Children

Name of Child _____ Date of Birth _____

Organization administering questionnaire _____ Date _____

Tuberculosis (TB) is a disease caused by TB germs and is usually transmitted by an adult person with active TB lung disease. It is spread to another person by coughing or sneezing TB germs into the air. These germs may be breathed in by the child.

Adults who have active TB usually have many of the following symptoms: cough for more than two weeks duration, loss of appetite, weight loss of ten or more pounds over a short period of time, fever, chills and night sweats.

A person can have TB germs in his or her body but not have TB disease (this is called latent TB infection or LTBI).

Tuberculosis is preventable and treatable. TB skin testing (often called the PPD or Mantoux test) or a TB blood test (called an IGRA) is used to see if your child has been infected with TB germs. No vaccine is recommended for use in the United States to prevent tuberculosis. The test is not a vaccination against TB.

We need your help to find out if your child has been exposed to tuberculosis.

Place a mark in the appropriate box	Yes	No	Don't Know
TB can cause a fever of long duration, unexplained weight loss, a cough (lasting over two weeks), or coughing up blood.
